

**LATEST APP  
AMENDMENTS 20TH  
NOVEMBER 2024**

# 1. Regarding the Font of the App System

Brother, we need to change the app system font to be unionized and same across the app. Please use the same font as the one in the Subscription AsSalam page.

Make sure it applies **across every single page**, and use the same font type. Including also in the Quran, the azan list names and others.

Most important part is the menu pages, so it will display all the menu pages with the same font as required based on the example shown here.

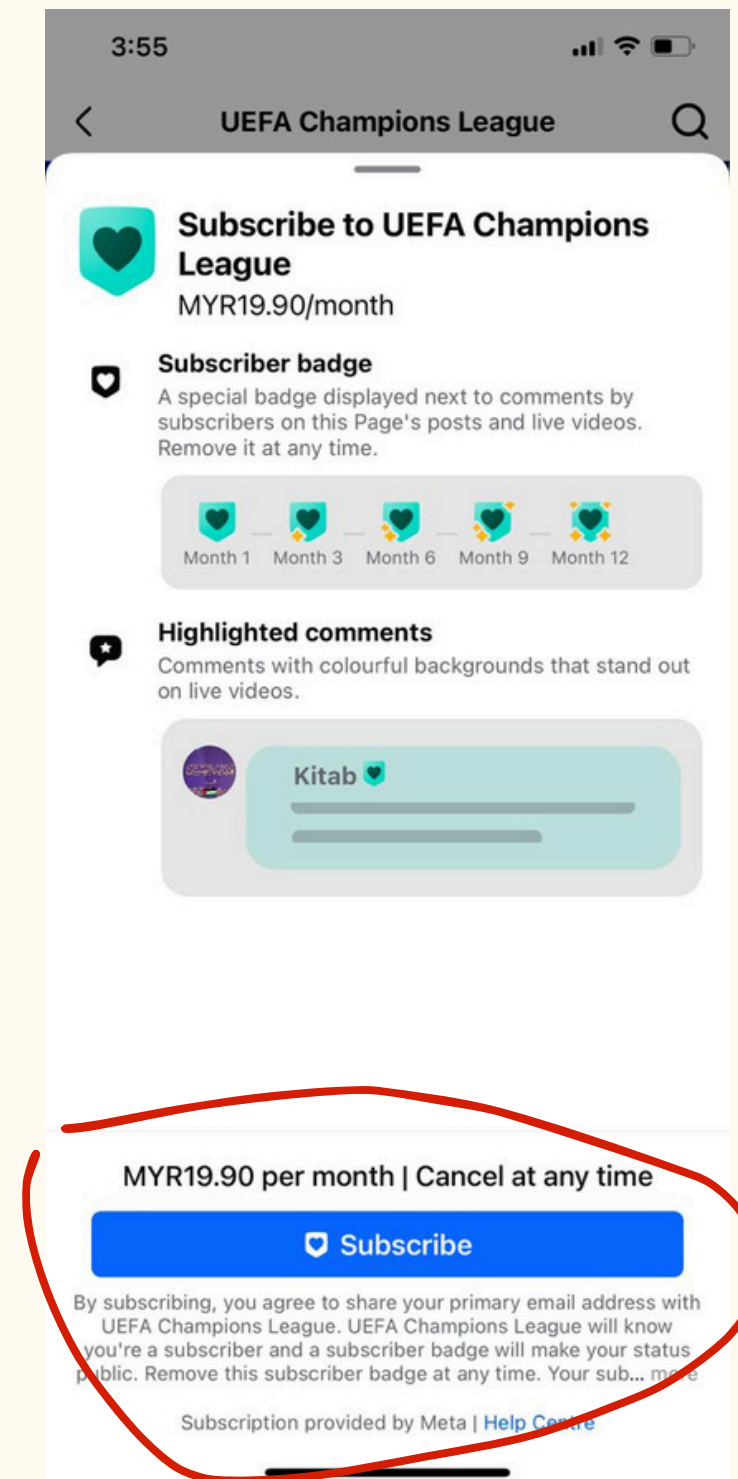

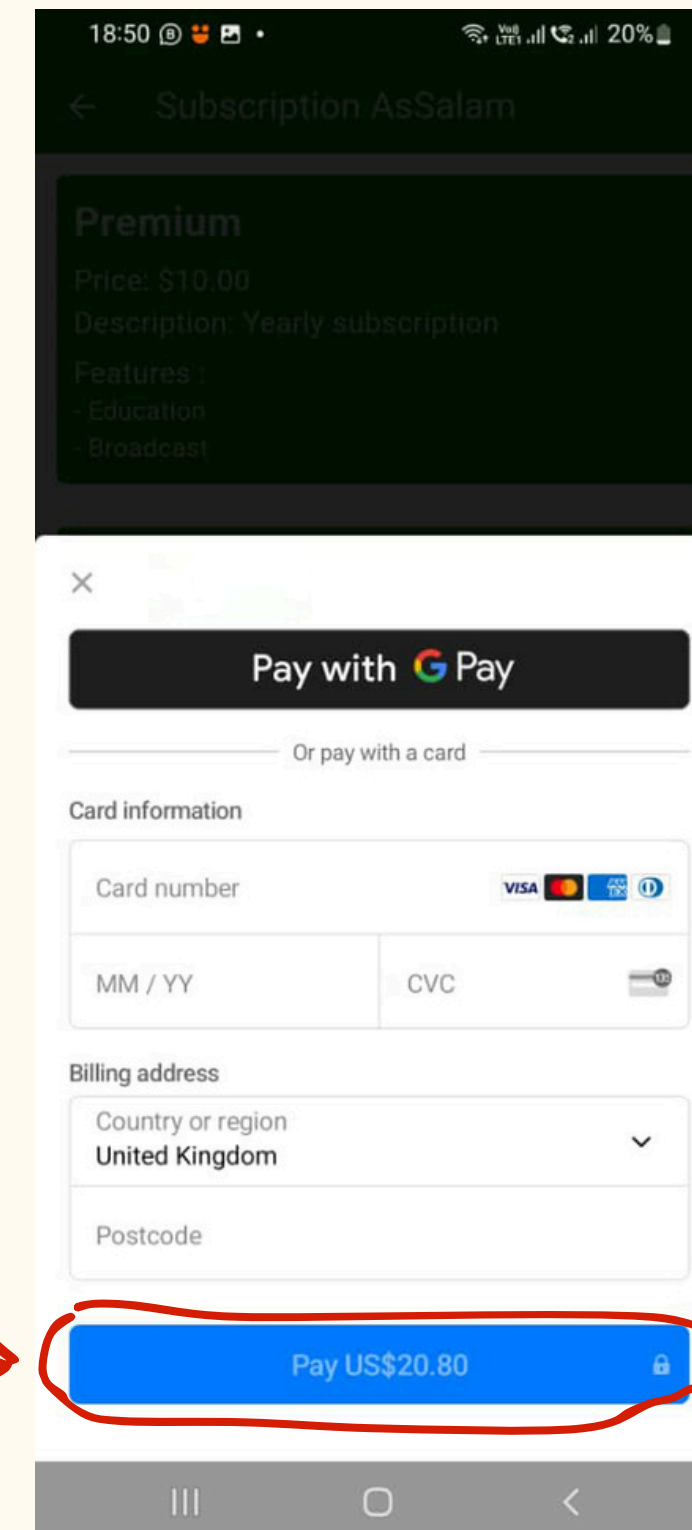

## 2. Find Way So that During Checkout to Pay for Subscription, It Will Automatically Display the Converted Amount to Pay in Native Currency.

This is one of the most important aspect that we can do for our app, we want the checkout page of the Stripe if can, to not display the amount to be paid in USD, but **in native currency instead.**

For example, if I'm here in Malaysia when checkout to pay in Stripe, it will **automatically converted** the subscription amount to be in MYR, if Indonesia, then it's IDR and others.

This is very important as users can already know and budgeted their own funds in their card, so that **there'll be lesser unsuccessful payments.**

For example, you can see from the screenshot of this subscription of UEFA Champions League here.

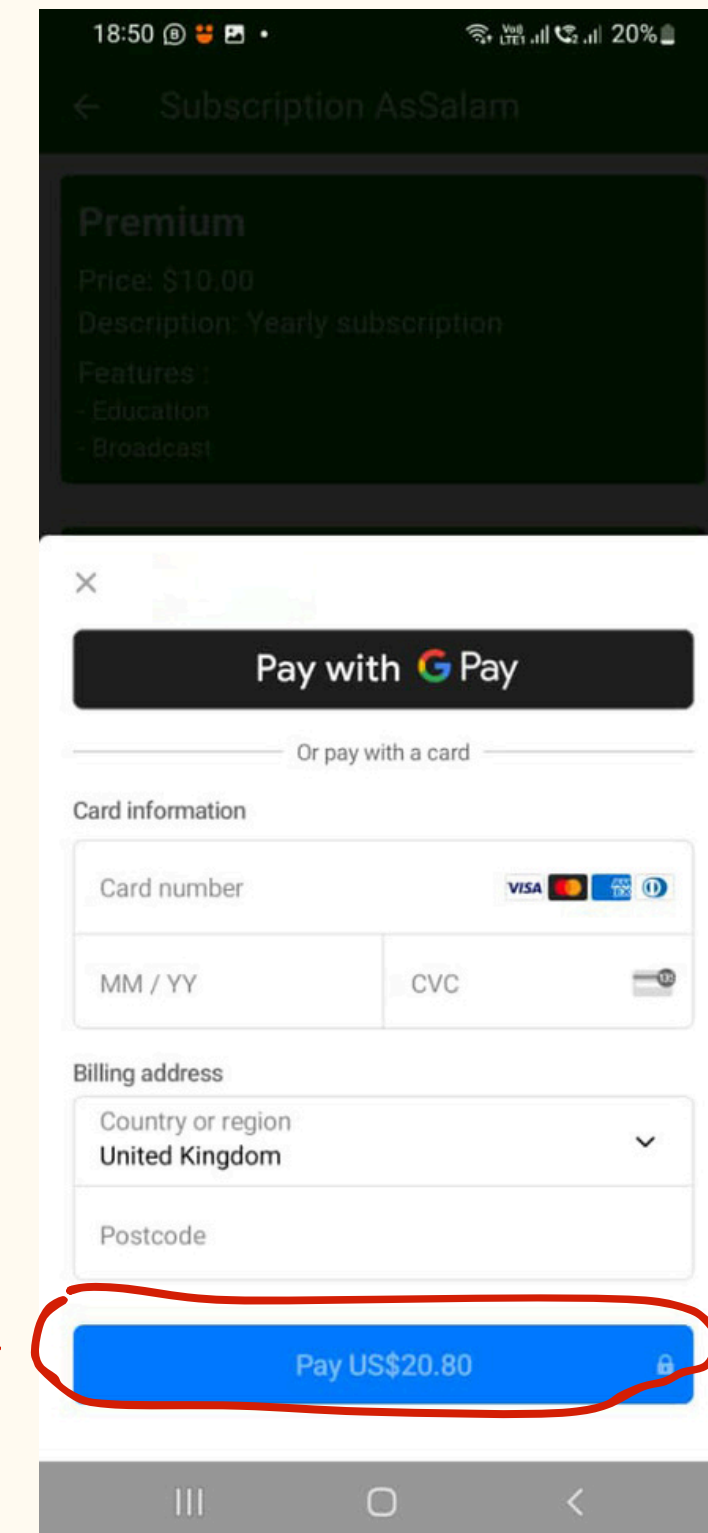

### 3. Inquiry Whether can Add and Accept USDT payment for subscription payments

This is another inquiry of us, we would like to know whether the app can accept USDT payments as one of the payment methods to pay for any AsSalam subscription packages.

If it can be done, we would like to proceed with it.

Make sure the current payment methods **still intact**, the USDT one is just **additional payment method** option only.

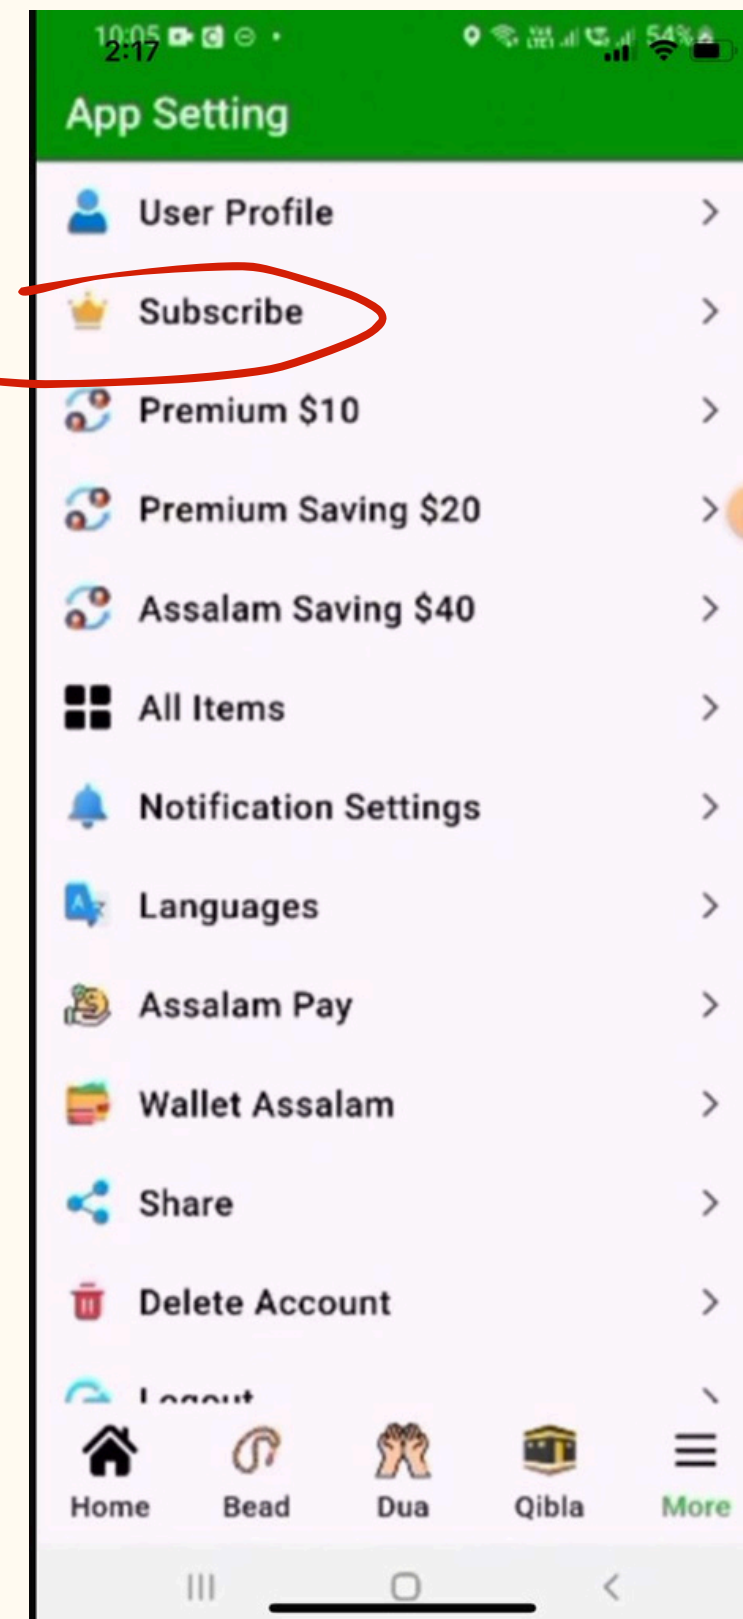

## 4. Add a Subscription Package of \$2 into the “Subscribe” Menu

Add a subscription package of \$2 into this menu.

This “Subscribe” menu page will only display this one package of \$2 subscription.

But during checkout to pay we want the checkout page of the Stripe if can, to not display the amount to be paid in USD, but **in native currency instead**.

Just like explained before.

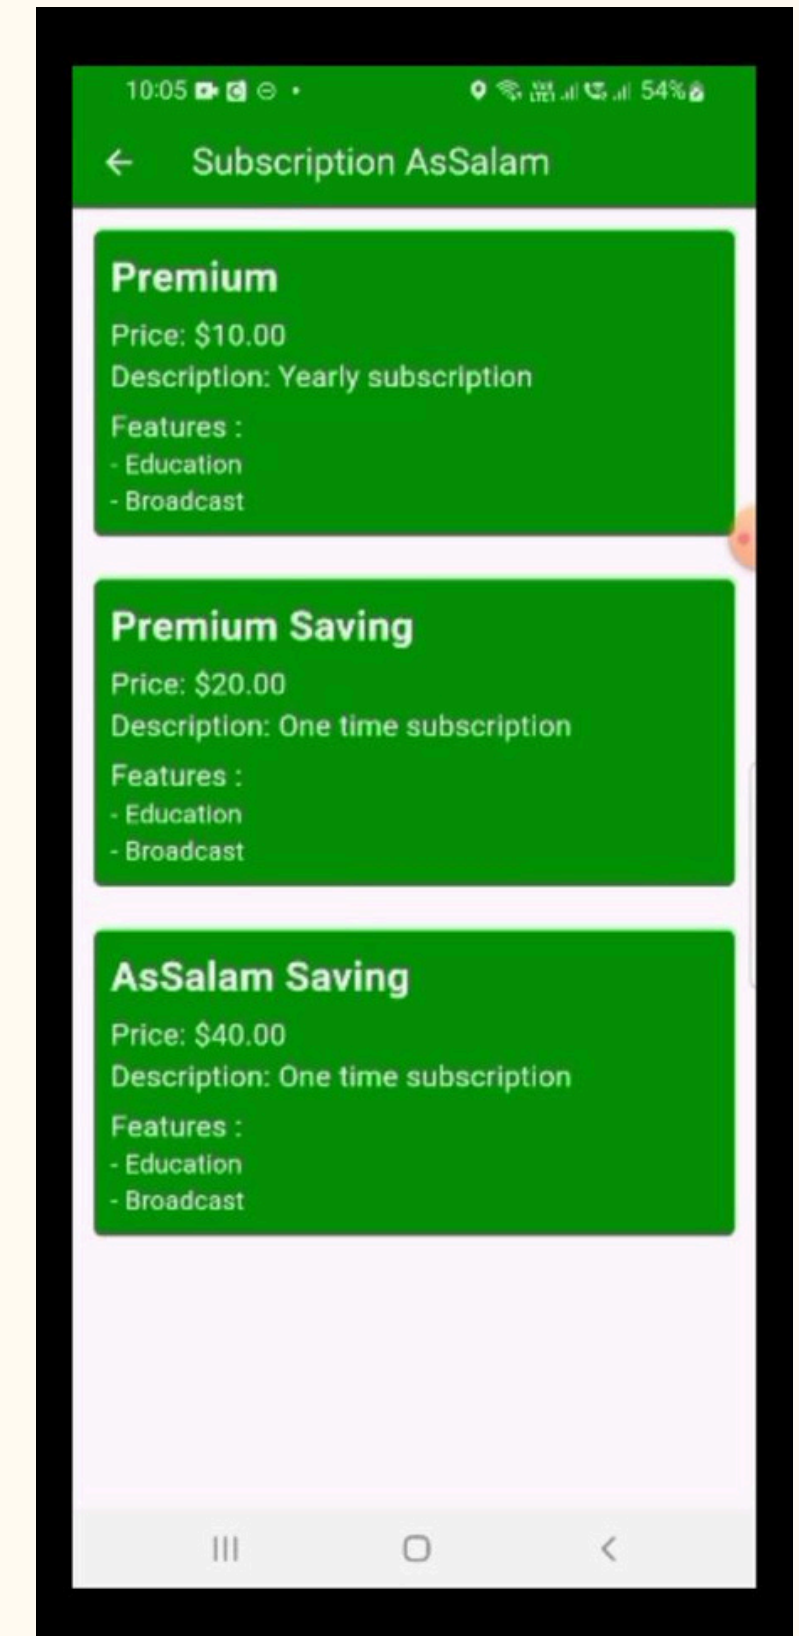

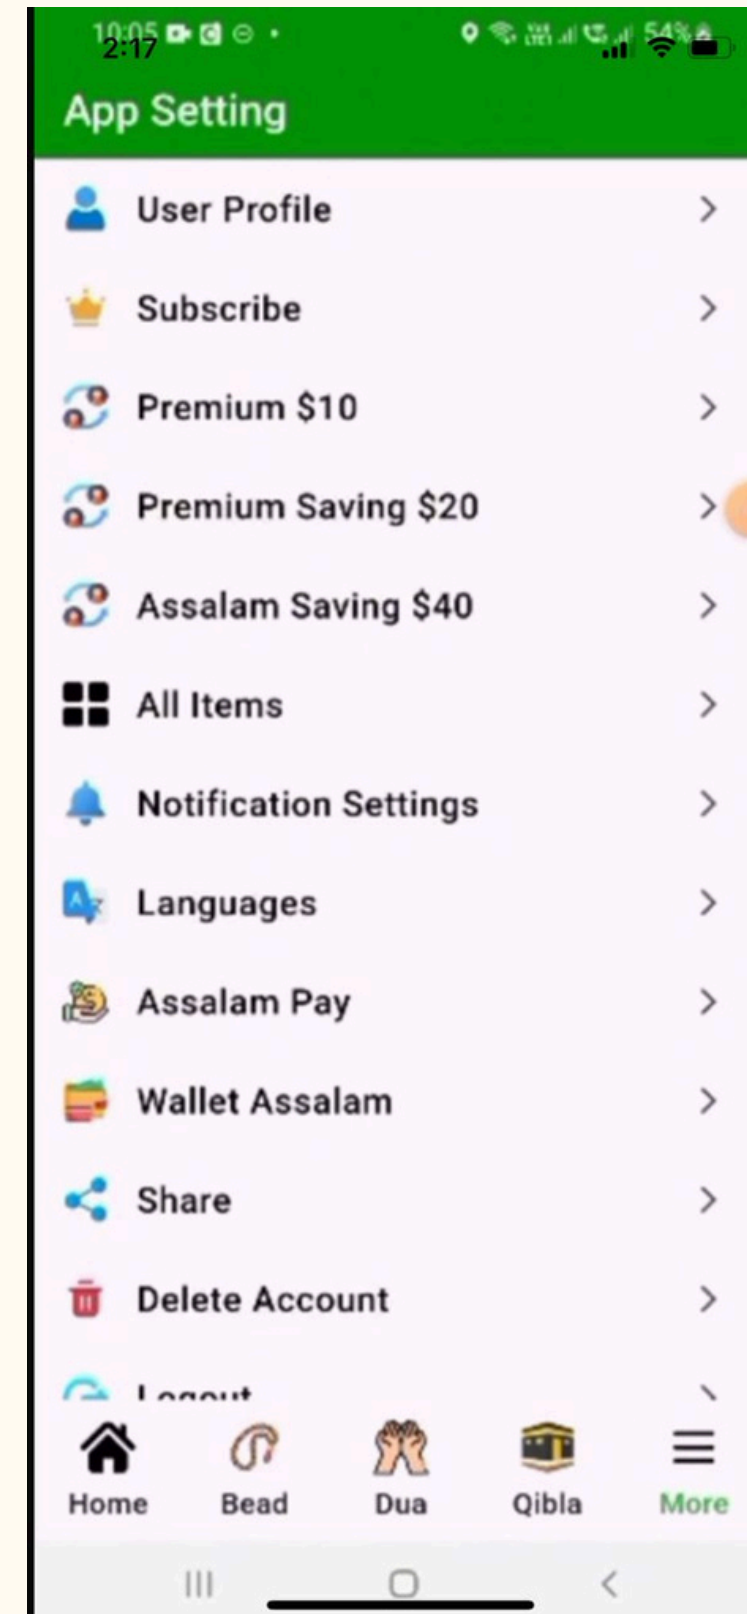

## 5. Add a Menu Page of “Premium” into the Menu Page

Please add another menu page named “Premium” into menu page. Add it to be underneath the previous “Subscribe” page.

And in this “Premium” menu page will display all of our subscription packages that consist of Premium \$10, Premium Saving \$20 & AsSalam Saving \$40

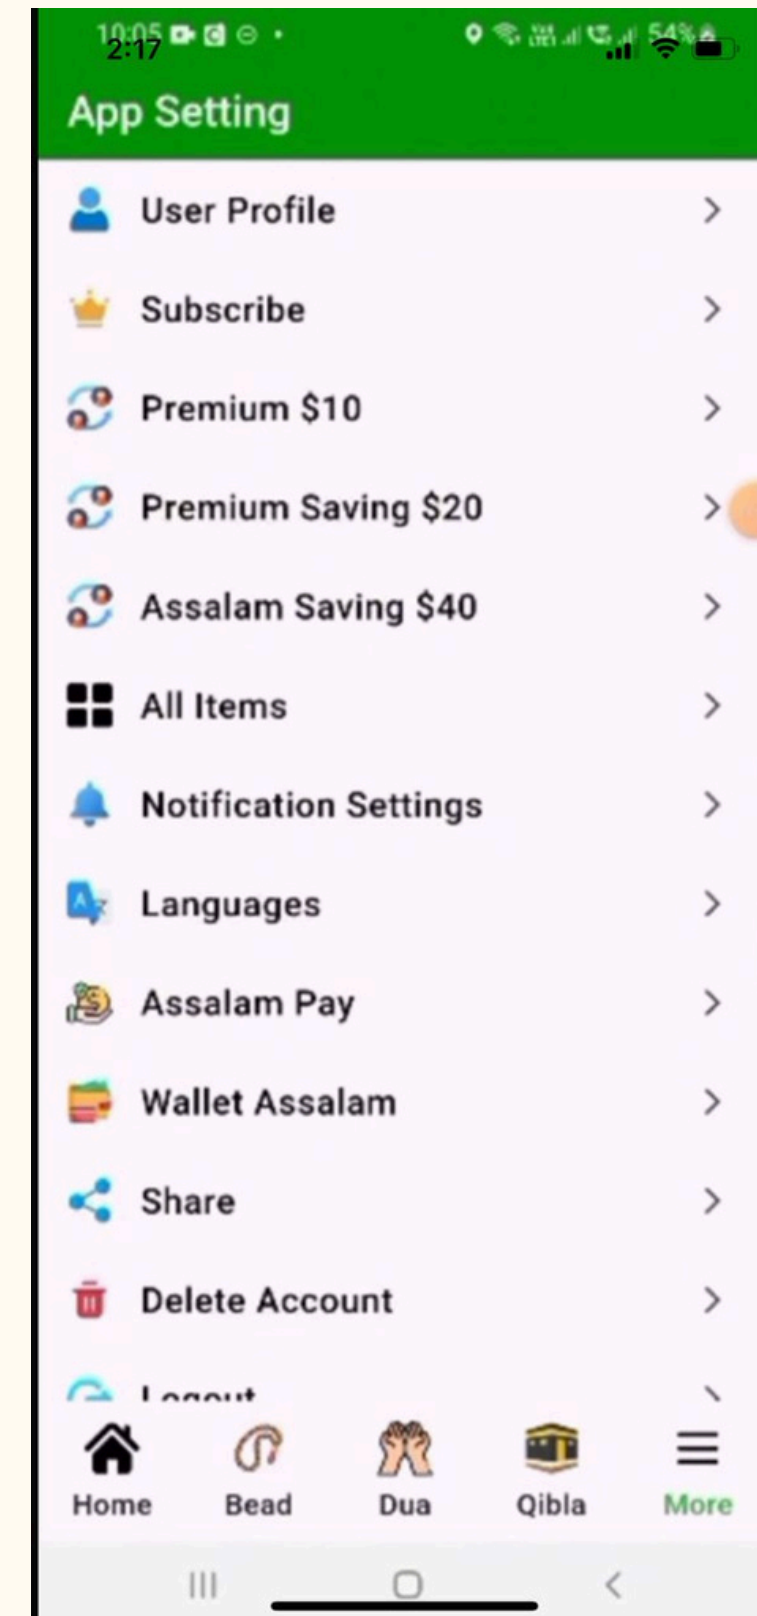

## 6. Add One More Menu Page That Will Display All Packages of Hibah AsSalam ROI Packages

In the menu page, please add another menu page of “Hibah” menu page. Place it underneath the previous “Premium” page menu.

This menu will function the same as previous “Premium” menu, where it will display the 4 packages of Hibah AsSalams:

1. Hibah AsSalam \$100
2. Hibah AsSalam \$200
3. Hibah AsSalam \$500
4. Hibah AsSalam \$1000

These are the packages of previous PDF sent regarding the ROI functional rewards.

## 7. Install the App of “Apa Doanya” from either Play Store or App Store, and Include All the Doas in the Dua App Page

Because of the app dua page looks terrible and not exactly as corrected as it would be. We've made decision to just follow this one app “Apa Doanya” which you can find through both app downloading platforms.

In this app is a collection of Duas that are taken from **certified group of hadiths**.

As you can see, you can see the main categories of the duas and also its subcategories. Please just copy and **include all these**.

As you can see, our dua page kind like empty now due to its unfunctionable.
